Angry	0.0%

AUDIO TRANSCRIPTION

I want to help me to complete regarding my mental health and this is for demonstration and testing purpose I'm going to make sure all the functionalities are working and I want to track the response time thank you it is under 5 seconds or not and how does the chat but handle handle a message on the door response generation also I want to see if we can we can record up to 3 minutes or not so let's leave this recording and let's check how much time will it take to pre-process the audio supposedly the the audio should not exceed 3 minutes so I will check how

long will it take to stop audio let's see the maximum recording duration and take it now it's 180 minutes seconds to 180 seconds is actually 3 minutes so let's see if it will automatically stop and how will it be possessed the whole audio to enter my the roots are working for the key that is no misty and you just want to to be the full functionalities I think it's been already more than 1 minute and in the preposition what time as we can see the audio for 2.5 seconds then we can't or extract features for every trunk and play the prediction the actually use the name for predict storing the mean and for prediction we take the average of the confidences to be used OK I might even when does the tripod
